

Senior .Net Developer

Overview

Senior .Net Developer

Job Location: Derby – Pride Park

Job Type: Full-time

Work Location: In person

Salary: £35,333- £55,570 per year

Data Clarity is a rapidly growing software house based in Derby and has offices in Bristol. Our clients are household names all around the world. The sectors we specialise in are Aviation, Retail, Fashion, Leisure, and Hospitality. We provide bespoke software solutions that interface with and build upon our existing Data driven systems. The comprehensive nature of our solutions means that we are able to provide true 'end to end' software systems for our clients' businesses. Our applications are constantly evolving to utilise the dynamicity of the technology on which they are built and the ever-increasing digital needs of the customers they are delivered to. For this reason, you will need to cope with a dynamic environment; constantly striving to learn and improve using industry standard principles and techniques

Responsibilities

You will work as part of an integrated Agile team responsible for designing and delivering an innovative platform-based technology that allows delivery of adaptive customer focused solutions to be developed in a fraction of the normal lifecycle.

- Developing both new products, modules or features and extending existing ones in line with the provided specifications
- Adhere to high-quality development principles while delivering solutions on-time and on-budget
- Enhance best practice development principles including code control and peer review with Visual Studio 2019.
- Writing code that adheres to the team's coding best practices and patterns, ensuring your code can be easily understood and extended by the others
- Accurately providing estimates and feedback on your progress
- Diagnosing and rectifying defects in your code and the code of the others
- Ensuring you keep issues up to date in TFS/DevOps
- Source control using the git-flow process and merging between branches
- Participating in the project Scrum sessions
- Engage in regular development team review sessions where you can provide feedback and suggestions on processes
- Participating in code reviews within the team
- Researching new techniques and technologies

Skills and Requirements

To be the right candidate for this role, it is expected that you will have the following experience and skills:

- Experience designing and developing enterprise grade software
- 8+ years of experience developing .NET Web applications (.Net Core) in a commercial environment
- C# and object-orientated programming.
- Rest APIs Architecture, Microservices
- MVC, Razor
- SOLID/DDD principals
- MS SQL Server and any other RDBMS/NoSQL
- GraphQL
- An ability to understand, design and develop abstract concepts that are driven from real use cases
- An ability to write clear, simple, and human-readable code
- Clear and concise communication skills
- Education to the level of a bachelor's degree (2:1 or above) in a scientific field, or equivalent

Other desirable skills that would be of benefit include:

- Experience using TypeScript and responsive web design
- Experience in complex Single Page application development
- Able to work with Agile/Scrum and Waterfall projects
- Source control using SVN and issue tracking using TFS
- An ability to understand and interpret complex business systems
- Development of Data Platforms, e-commerce, CMS and ERP solutions
- Requirements gathering and specification documentation
- Solution architecture design and understanding

Experience
